Notes:

- 1、Tantalum capacitors can't been measured by multimeter (Easily cause irreversible damage and lead to reject)
- 2、Capacitance, DF measure frequency: 100Hz, U_r=2.20 -1.0V, U_r=1.00 -0.5V(effective value), measure method is by series equivalent circuit.
- 3、Measure leakage current above 125°C,please use derated voltage. DLC read within 5 minute.
- 4、Special size and big capacitance products, please negotiate with us
